

## Statement of Participation

The Urban Nature-based Climate Solutions Accelerator series was established to support communities ready to take substantive steps towards implementing nature based climate actions. The three-part training series has been designed by and for multi-stakeholder communities working together to develop and implement these strategies. Central to the Theory of Change associated with this accelerator series is the belief that effective nature-based climate solutions depend on a multi-stakeholder, multi-sector collaboration that is community-based and equity-centered. To effectively convey the range of information, implementation strategies, and technical insistance designed into this Accelerator sequence, communities will be expected to recruit and engage a multi-stakeholder cohort. Each partner in this cohort is asked to make an explicit commitment to participate in one or more portions of this training sequence and remain engaged through completion of the program. This document represents the statement of commitment by the entire stakeholder team selected by each community to participate in this training. By signing this document the members of the participating community formally recognize this commitment.
